

Sweden - Workshop Italy

Fruit print

Education purpose: to learn some words in english and swedish and one way how to be creative with natural materials.

At first we introduced some fruits and what color it had. The children repeated after us in both english and swedish. We made print by some different fruit halves, painted with liquid colors, on paper to get small children at the age of 5 to create art. In Sweden this is a common form of art design for younger children. The pupils created this in small groups.

Materials used: apples, pears, oranges, brushes, liquid color and big size papers.

Evaluation: the children liked the activity and they were very enthusiastic about both learning the words and create with this material and their hands.
